9.2 Systems of Equations & Inequalities in Two Variables

001

Procedure for solving inequalities in two variables:

- If possible, solve for y . Graph the curve described by the equation.
- If the form is $y \leq mx + b$ shade below the line
- If the form is $y \geq mx + b$ shade above the line
- Otherwise, use a test point to determine where to shade.
- Use a dotted line for a strict inequality!

001

Examples

Graph the solution set to the inequality:

1. $y > 2x$
2. $2x + 3y \leq 6$
3. $2x^2 - y < 1$
4. $\begin{cases} x^2 + y \leq 4 \\ x^2 - y \leq 3 \end{cases}$
