

1. Use IOS DHCP in both locations to assign IP addresses on both LANs
2. Private addresses on both LANs will translate using the public IP address of the serial interface on both routers.
3. Configure PPP CHAP authentication between the two sites
4. All WWW requests to SOHO 1 must be forwarded to Host A
5. All FTP requests to SOHO 2 must be forwarded to Host C
6. After testing the functionality of the lab, capture and print the output of the following show commands
 - *show ip int brief
 - *show IP route
 - *show ip nat translations
 - *show ip dhcp bindings
 - *show run
